

SITEFLO

Mobile Software for Performance Improvement Projects

Focus on continuous improvement while reducing downtime, waste, rework and improving your OEE.

Configure and deploy a discrete, semi-automated solution for actionable intelligence and deploy it in less than an hour.

Get transformative alert notifications in real-time on any device, whether you're on site or away.

SITEFLO

With SITEFLO, R.V. Evans Company can help you identify specific areas of improvement within your production facility.

1. We listen to your concerns to identify & review desired performance improvement projects.
2. We briefly observe the specific areas of concern to establish a performance baseline.
3. We conduct a full-shift observation to monitor machine performance and accurately record all of the downtime that occurred during that shift.
4. We then provide you with a detailed overview that outlines any and all issues identified during the full-shift observation, equipping you to make the most intelligent decision for performance enhancement.

\$ *Do you experience bottlenecks in your production and/or packaging area and struggle to quickly identify details about the cause?*

\$ *Would your facility benefit from the ability to instantly access real-time data on how your equipment and consumables are performing and identify the reason for unscheduled down time or re-work?*

\$ *Are you having a difficult time obtaining budget allocation for new equipment due to the lack of solid data to provide to management?*
