

NEW

High-Strength Tenax® Brick Strapping

New High-Strength Tenax® polyester strapping is engineered specifically for the brick industry to improve the overall quality of brick loads. Unlike the original High-Strength Tenax, High-Strength Tenax for brick now includes proprietary additives that provide a number of significant strap improvements for maximum package reliability.

Improved performance

- **Higher UV protection –**
eliminates translucency, minimizing UV degradation when exposed to long-term outdoor storage
- **Retained thickness –**
maintains original gauge when tensioned, decreasing breaking and splitting
- **Less debris –**
decreases strap debris during the tensioning and welding process, reducing parts wear
- **Enhanced weld strengths –**
improves weld strengths and provides less deviation between welds, increasing reliability
