

Paslode RounDrive® Hot Dipped Galvanized Plus! Nails

Ideal for All Pressure Treated Lumber Applications

Paslode's 30 degree full head RounDrive® Hot Dipped Galvanized (HDG) Plus! Strip nails feature superior corrosion protection for use in all pressure treated lumber applications, including ACQ.

Paslode HDG Plus! nails fully meet or exceed the zinc coating weight requirements of the American Society for Testing and Materials (ASTM). Those specifications (ASTM A153 Class D) require 1 ounce of zinc per square foot to prevent corrosion.

"We use a proprietary test method to evaluate nail anti-corrosion properties," said Jacek Romanski, Paslode marketing manager. "These aggressive corrosion resistant tests best represent how the lumber and nails will interact in real life conditions at an accelerated rate.

"Both internal and independent third party tests confirm that Paslode HDG Plus! Nails have 98% less red rust than conventional HDG. Staining, streaking and nail discoloration are reduced by 80% compared to conventional hot dip galvanized nails. Romanski adds, "HDG Plus! Nails are also suitable for use in Cedar applications since the coating acts as a moisture-barrier and helps minimize staining.

Paslode HDG Plus! Nails feature an advanced paper tape collation design and are available in sizes ranging from 2 to 3-1/4 inches in length and .113, .120, and .131 in nail diameter.

The nails can be used in Paslode 30 degree strip framing nailers including the new PowerFramer PF350 Air Nailer & CF325 Cordless Framing Nailer.

Paslode, a division of Illinois Tool Works, is a leading manufacturer of cordless and pneumatic nailers, staplers, and fasteners. The company's products are widely used by professional remodelers and carpenters for

framing, sheathing, trim and finish applications, fencing, floor and roof decking, siding, and insulation.
