

Productivity Option: The Autobag® Optical Finger Switch – Improves operator safety during bagger cycling

Productivity Options are often a cost-effective way to optimize overall packaging system performance. Automated Packaging Systems offers a variety of basic Productivity Options that are designed to increase packaging speeds, improve ergonomics, or efficiently tie-in to existing production lines.

The Optical Finger Switch is a semi-automatic bag cycling option that improves safety by ensuring the operator's hands are safely away from the bag sealing area prior to sealing. Both switches must be actuated simultaneously to activate the bag sealing process. The Optical Finger Switch mounts easily to the top of the bagger for operator comfort.

The Optical Finger Switch is easily set-up using the operator-friendly AutoTouch™ Control Screen, which also enables job storage and recall for rapid changeovers.

User Benefits

- Provides semi-automatic cycling while improving operator safety
- Ergonomically mounted on top of the bagger for operator comfort
- Optical design is simple to operate
- Sets up easily using the AutoTouch Control Screen
