

Laminations®

VBoard® with Corrugated

ENGINEERED SOLUTIONS

Add heavy-duty VBoard® on the interior or exterior of corrugated boxes to add transport stability to any packaging system. VBoard offers a cost-effective solution that provides the rigidity needed to prevent damage and ensure shipments arrive at their destination in top condition.

Add Structure to Add Strength VBoard® delivers strength where it's needed to complement corrugated packaging

- Reduce damaged loads and rejected shipments
- Prevent crushing or wrinkling of corrugated that can be caused by clamp trucks
- Design into corrugated packages and displays, or supply as components to contract packagers
- In some cases, corrugate thickness can be reduced if VBoard is applied to the packaging, resulting in source reduction
- Integrates easily into current packaging systems
- Can be customized for particular applications using other packaging components such as foam
- Proven in both laboratory tests and on-the-job trials to significantly reduce damage
- Recyclable and environmentally friendly
- Great Northern Corporation is a member of the Association of Independent Corrugated Converters (AICC)

Our team of skilled designers and engineers can analyze your specific situation and recommend the most appropriate combination of edge protection and corrugated packaging components. We can test appropriate options at our ISTA-certified testing facilities, including shock, drop, puncture and static or dynamic compression testing. Contact your Laminations representative to set up a packaging consultation.

INTERIOR PROTECTION

Inside the box, VBoard increases product protection, resulting in fewer damaged returns.

Outside the box, VBoard adds structural integrity to prevent damage and allow pallet loads to be stacked higher in warehouses.

EXTERIOR PROTECTION

Adding VBoard to the pallet load provides reinforcement and stability.
